

# Multimedia Components For ILT Sessions

## Customer Profile

This European national organization provides training and employment services to its labor market. It aims to enhance skills and capabilities of individuals and enterprises.

## Business Needs

The client provides classroom based training programs wherein instructors teach based on standardized slide presentations. The programs are heavily trainer dependent, thus resulting in varying learning messages and outputs. The client wanted to restructure the presentations to enhance the information content, improve the attractiveness, and achieve more standardized learning outcomes.

## The Solution

The content covered a series of mathematical theories. We reorganized these so as to enhance the instructional flow. We started by describing them, and followed this up with supporting illustrations. We then brought in worked examples, which were presented step-by-step, thus reinforcing the lesson. Finally, we allowed learners to check

## Client Speak

"I am very satisfied with every aspect of the work that upside has undertaken for us to-date, quality, speed of turnaround and value for money is first class."

Francis McNamee  
Multimedia Instructional Design, Ltd  
Ireland

their understanding by applying their skills to assessment calculations.

Through the use of graphics and step-by-step animations, we presented some of the more complex processes and equipments in a simpler manner, to assist understanding.

## Highlights

- Redesign of instructional flow
- Enhancement of visual design
